LLM
- Start with an LLM that we have immediate access to
- Llama 2 and especially Llama 3 have a waitlist so we should apply ASAP

MIMIC Dataset
- For any problems and queries we can contact professor Chang
- Make use of the tool Bigquery (SQL related)
- Instead of working with the whole database each time, only extract a specific dataset in csv form (e.g. only a specific type of patients)

GANs
- For any problems and queries we can contact professor Chang
- Some compatibility and version mismatches have to be solved

Future Planning
- We should set specific milestones
- For our next meeting (Tuesday 7/5 9-9:45) we should have a more concrete plan and have some progress done
- If someone doesn't plan to attend they should've sent an email beforehand explaining why.

Layman's text
- Stick to 500 words limit
- Write it as if we explain our project for a job interview
- Add our contact info (eg LinkedIns or/and Github)
